**Montage:** A portable, compute-intensive service that will deliver science-grade mosaics on-demand, with requests made through existing astronomical portals

Team: Attila Bergou (JPL), G. Bruce Berriman (Caltech IPAC), John Good (Caltech IPAC), Joseph C. Jacob (JPL), Daniel S. Katz (JPL), Anastasia Laity (Caltech IPAC), Tom Prince (PI, JPL/Caltech), Roy Williams (Caltech CACR)

Dust clouds and nebulosity in the plane of our Galaxy as captured by the 2 Micron All Sky Survey (2MASS). The bright pinkish spots just below the center make up the War and Peace Nebula (NGC 6357). This 12,000 x 12,000 pixel mosaic was constructed from 347 individual images in each of three near-infrared wavelengths: J (1.25 μm), H (1.65 μm), and K (2.2 μm).

More information on Montage is available at: http://montage.ipac.caltech.edu/
